UNIVERSAL BRUSHWARES

Pakistan's No.01 Paint Tools Company

IN PAINTERS WE TRUST

At Universal Brushwares, we hold painters in high regard for their expertise, craftsmanship and feedback. They push us to constantly improve our products as they immediately recognize and understand quality. Listening to painters has allowed us to develop coating applicators that surpass their expectations. With over 75 years of experience, Universal Brushwares has continued to value the painter and their contributions to our products.

**MAKING US PAKISTAN'S PROFESSIONAL PAINTERS NO. 1 CHOICE
FOR PAINT APPLICATORS & TOOLS**

75

YEAR OF EXPERIENCE

GET TO KNOW US

For the 75+ years we've been in business, professional painters have asked for our products by name, because their livelihoods depend on our reliability.

Founded in 1947, Universal Brushwares is Pakistan's largest manufacturer of paint tools, and the painter's first choice for brushes, rollers and accessories. Over the last 7 ½ decades we have grown into a brand renowned for superior product quality and service and have become the partner of choice for retailers all over the country.

As old as Pakistan, the Universal Brushwares family is extremely proud of our rich heritage and most importantly, of our longstanding relationships with generations of painters.

At Universal Brushwares, we strive to stay ahead of the curve by delivering superior quality products, introducing new, innovative tools and continuously reinvesting in our business to improve our capabilities & customer service.

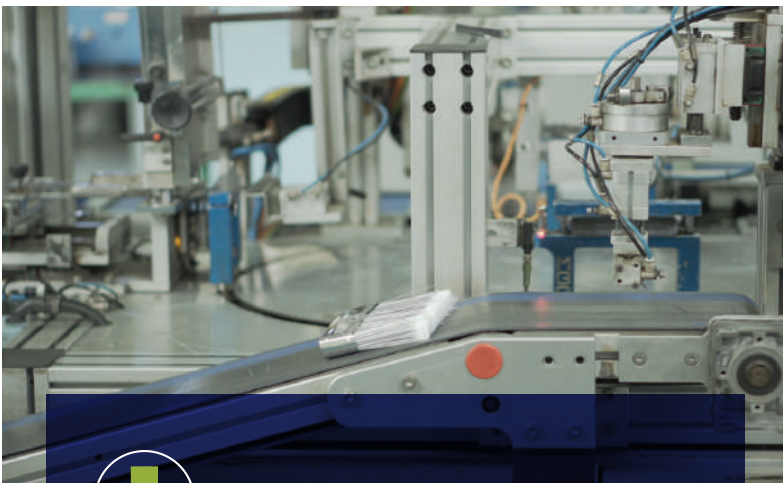

Above everything, we at Universal Brushwares put the needs of the painter first by delivering world-class tools to make the painter's hard work speak for itself.

CUSTOMER CENTRIC PREMIUM QUALITY PRODUCT INNOVATOR

Founded in 1947 as the pioneer local manufacturer of paint tools in Pakistan, our company was driven by the vision of bringing color to the newly formed nation. Over the past 75+ years, through the efforts of three generations and a relentless pursuit of innovation, drive, and devotion, Universal Brushwares has established itself as a customer-centric leader in the industry, renowned for premium quality products and a commitment to innovation.

OUR FACILITY

PAINT BRUSH

We manufacture our brushes using a combination of manual craftsmanship and automation. High-end products are exclusively handcrafted with meticulous attention to detail, while budget-friendly brushes are produced using a combination of both.

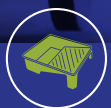

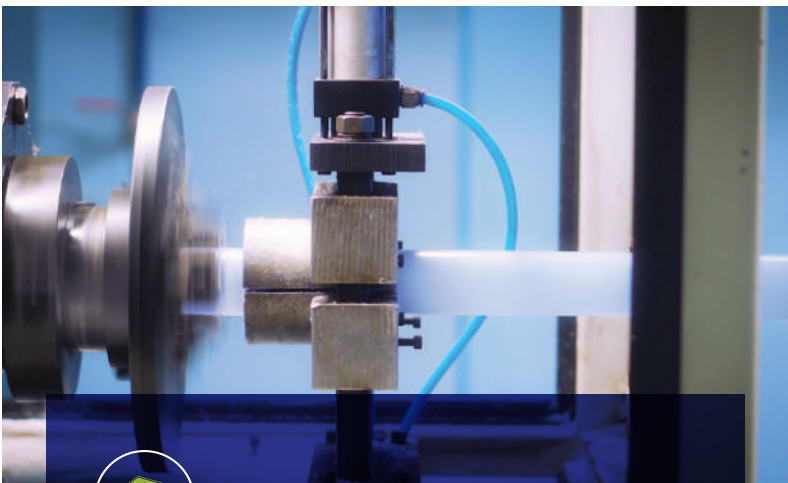

PAINT ROLLER

We utilize thermofusion technology for all our paint rollers, which involves heating the roller core to a softened state. With expert precision, we then fuse the paint fabric onto the pipe, resulting in a robust and durable bond between the two materials.

UNIVERSAL BRUSHWARES has experienced significant growth, with a factory now spanning over 100,000 square feet and strategically located in one of Pakistan's top industrial zones. To ensure superior quality, the company utilizes state-of-the-art European machinery for critical production processes.

With a robust manufacturing capacity, Universal is capable of producing over **8,000,000 paint brushes** and **7,500,000 paint rollers** annually. Additionally, the plastics division has the capacity to produce more than **600 tons per year**, while the filament division can also extrude over **600 tons per year**. These combined facilities allow the company to create a wide range of product combinations and variations, all under one roof.

PLASTICS

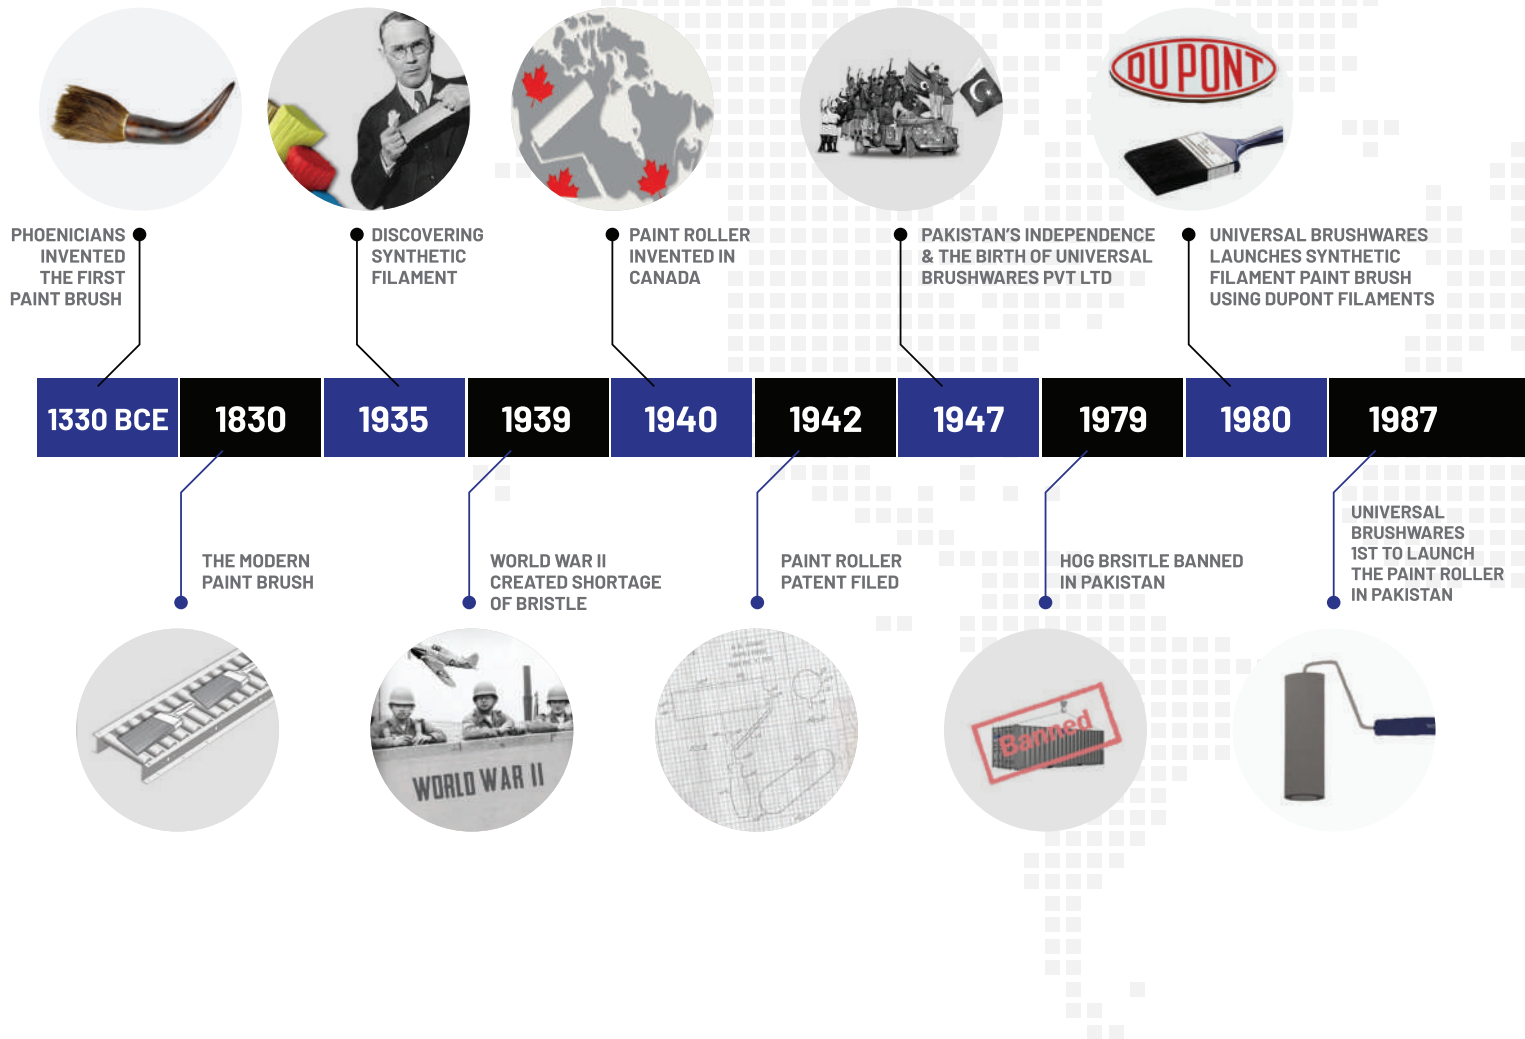

In addition to our expertise in injection molding for brush handles and parts, we also excel in extruding pipes and wedges. With our state-of-the-art facilities, premium materials, and skilled team, we are capable of delivering top-quality extruded products alongside our injection molding capabilities.

FILAMENT

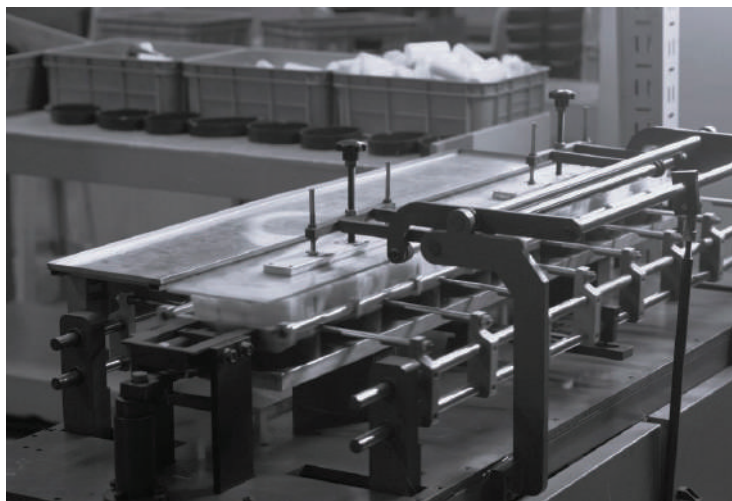

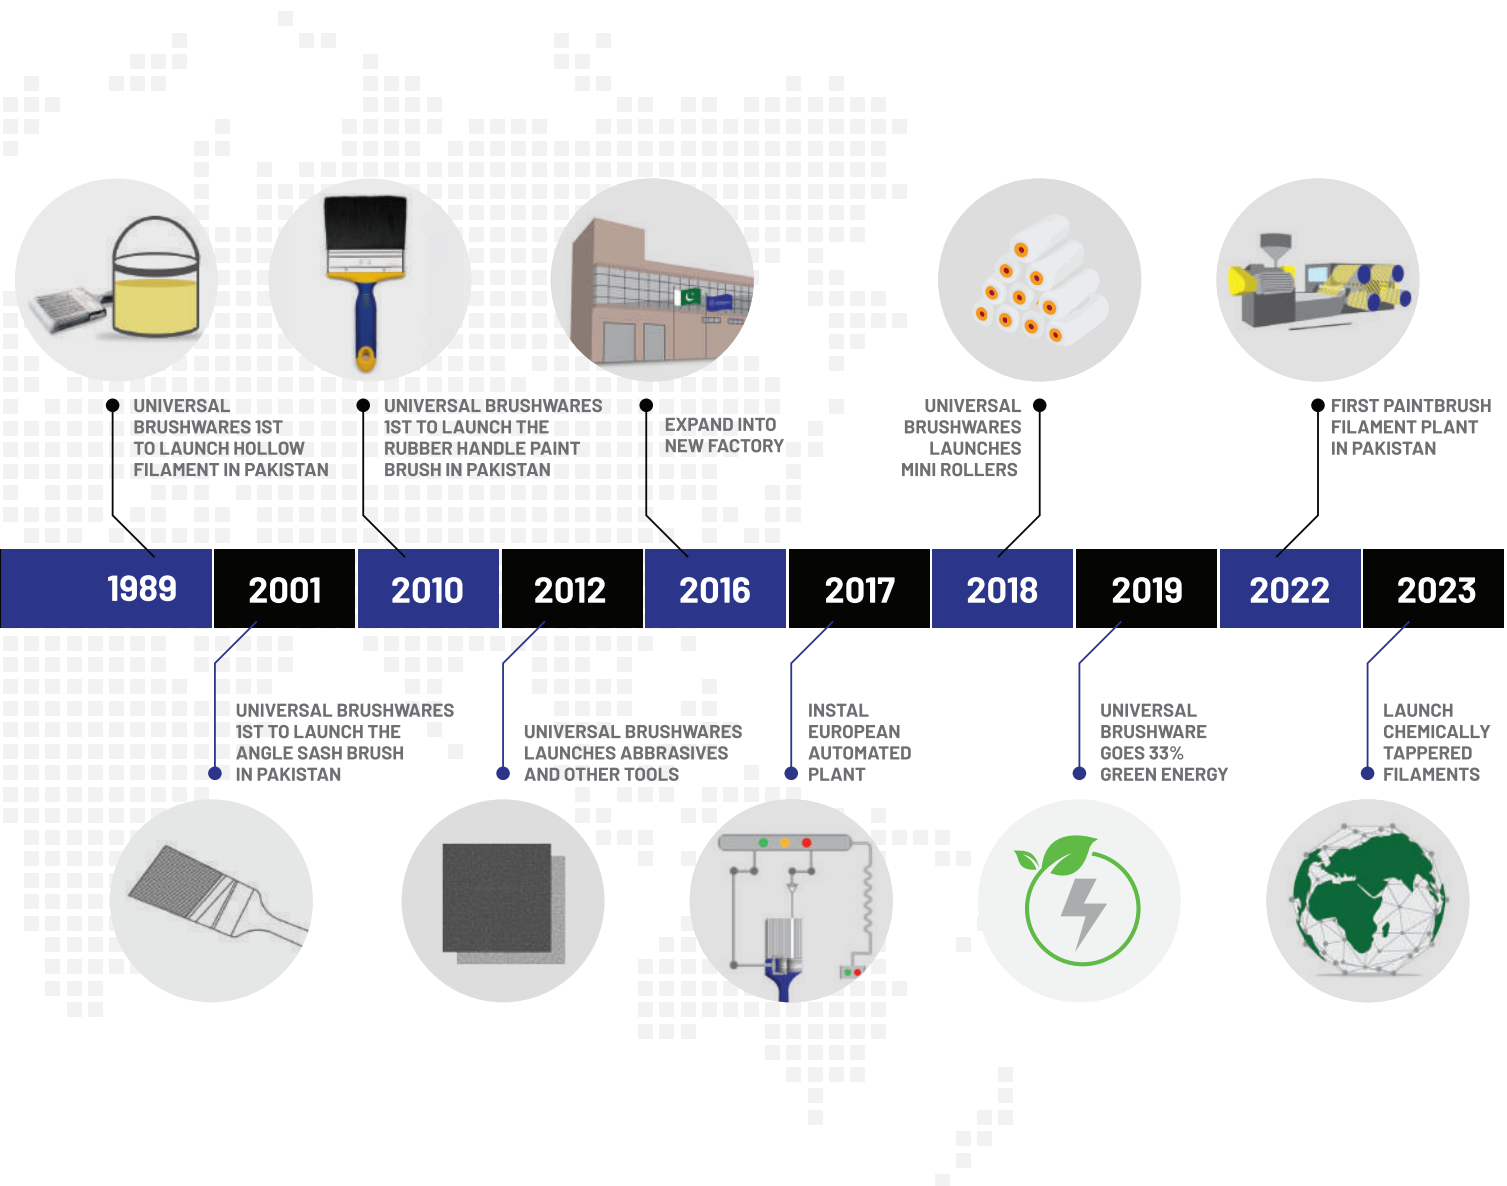

We take pride in producing high-quality filaments using unique production methods that enhance filament performance. Our expertise includes tapering filaments using chemical reactions, resulting in some of the finest filaments available in the market.

OUR HISTORY

TODAY: UNIVERSAL BRUSHWARE

UNIVERSAL BRUSHWARES remains the oldest, largest and most respected paint brush and roller manufacturing company in Pakistan. UNIVERSAL continues to launch cutting-edge innovative products, expand its product offering, and export to a growing number of countries globally.

WHY UNIVERSAL?

75 YEARS OF KNOW HOW

Universal Brushwares products are manufactured to the most exact standards, with the greatest care given to each detail at every step of the process. Universal prides itself in using only the highest quality materials so that every time a painter purchases the product, he can be certain it will deliver the same superior results.

QUALITY CONTROL AND ASSURANCE

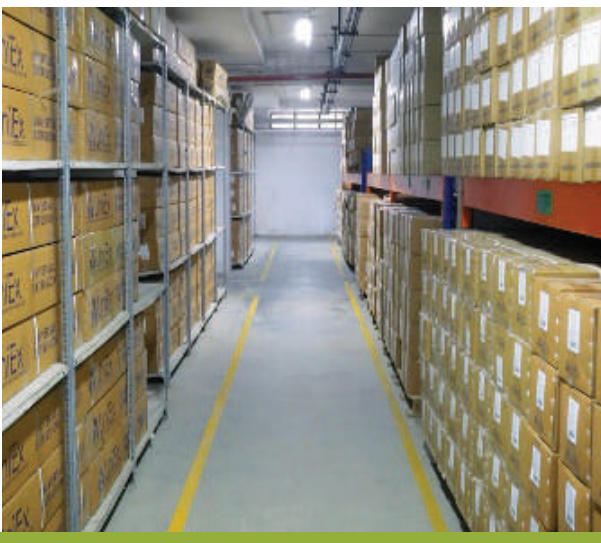

At Universal Brushwares, we prioritize quality in every aspect of our operations and company culture. As an ISO Halal certified company, we have implemented robust quality management systems to ensure efficiency and effectiveness. Our cutting-edge ERP system helps us streamline and control all our processes for maximum efficiency.

We also have a dedicated quality control team that undergoes continuous training and retraining to ensure that we meet the highest quality benchmarks. Our commitment to quality is ingrained in our DNA, and we consistently strive to exceed customer expectations by delivering products of unmatched quality.

VERTICAL INTEGRATION

At Universal Brushwares, we have achieved vertical integration in critical production processes, including filament extrusion, tapering, plastic injection molding, pipe, and wedge. This allows us to have control over the quality of raw materials and reduces dependence on external vendors. By having these processes in-house, we can ensure consistent quality and maintain high standards throughout our production cycle.

SUPPLY CHAIN

Universal Brushwares has established long-term relationships with key suppliers worldwide. By maintaining multiple suppliers, we ensure comprehensive vendor options, which contribute to quality and price stability. This enables us to offer competitive prices to our customers while maintaining our commitment to quality and reliability.

ENVIROMENTAL RESPONSIBILITY

At Universal Brushwares, we prioritize environmental sustainability. We have taken steps to adjust our energy mix, with 33% coming from renewable sources. This significant reduction in our carbon footprint demonstrates our commitment to preserving the earth's resources for future generations. We believe in playing our part in promoting sustainability and taking responsible actions towards protecting the environment.

SOCIAL RESPONSIBILITY

Universal Brushwares is dedicated to making a positive impact in our community. Through our sister concern, Kazim Trust, a private non-profit trust established in 2008, we provide support to children with learning differences, such as ADHD and dyslexia. We believe in giving back and contributing towards the betterment of society, especially in areas where we can make a meaningful difference in the lives of those in need.

PAINT BRUSHES

BRAND POSITIONING

UNIVERSAL BRUSHWARES has implemented a 3-tier product positioning strategy to provide clarity to our end-users about the varying qualities of our products. This approach ensures that painters have a clear understanding of the quality level of a Universal Tool, allowing them to make informed choices based on their specific needs.

ELITE

Our 'Best' product range is specifically crafted to provide longevity and deliver a world-class finish. Made with superior raw materials, these brushes are designed to meet the high standards of professional painters. The soft grip handle ensures comfort during extended use, making them a top choice for professional painters who value both performance and comfort in their tools.

These brushes are crafted with longevity and a world-class finish in mind, ensuring they can withstand frequent use without compromising performance. These brushes are built to last and provide exceptional results. Additionally, the soft grip handle offers comfort even during extended painting sessions, ensuring a smooth and comfortable painting experience.

PREMIUM

VALUE

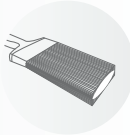

Designed for painters who prioritize speed and economy in their projects. Our brushes are an excellent value for disposable use, providing high value and performance for limited use applications. These brushes are crafted to deliver efficient results while keeping costs in mind, making them ideal for projects where disposable brushes are preferred.

HOW TO RECOGNIZE A PROFESSIONAL BRUSH

FILAMENT & FILL WEIGHT

FILAMENT: Synthetic materials formed into filaments through a multi-step process. Can be solid or hollow, tapered or level & tipped and flagged. Hollow filament is most suited for water-based paints and solid filament ideal for oil-based paints.

FILL WEIGHT: Pinch the filaments to see how well the brush has been filled. Too little fill weight in the brush will lead to Fish Mouth causing paint splatter as there will be less control. Found in low quality brushes to reduce cost.

FERRULE

Metal band that holds the filament and handle together. Attached by nails. Since brushes interact with walls, use rust proof metals such as stainless steel or nickel.

KEEPER

Used to store, maintain & preserve the paint brush. Have a tapered shape to help keep preserve the shape of the brush.

FINISH

The best professional paintbrushes are tapered to a fine edge to further improve cutting, coverage and finish. The tips of the filaments will also be flagged. Un-tapered or level filament reduces the price of the brush, but sacrifices capacity, coverage and control. Look for a smooth feel of the filaments on the top of the brush. The softer the feel the smoother the finish.

TAPERED VS UN-TAPERED

Tapered means that the length of the filament is thicker at one end & thinner at the opposite end. This ensures even release of paint and prevents paint from being dumped onto the surface.

TIPPING & FLAGGING

Tipping is a process by which the ends of the filament are sanded into pencil point like tips. This gives the working end a slanted appearance and provides a smooth & even paint release. Flagging is the process by which the tip of the filament is split as shown in the illustration. This significantly increases paint coverage & reduces brush marks, during decorating & improves overall paintbrush performance.

CHOOSE THE RIGHT BRUSH

3" - 6"

2"

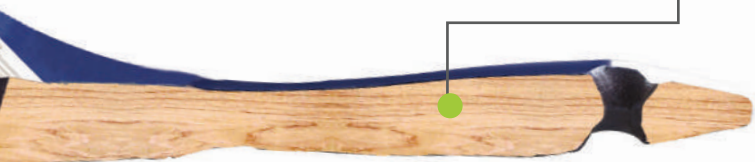

1"

RUSH

together and helps give form to the brush. After, it is essential that a professional paint brush has resistant platings such as nickel & copper.

brush after use. Good keepers will maintain the shape of the brush.

COMFORTABLE HANDLE

Comfort is essential! The painter should never feel strain to his back, neck or arms, allowing him to easily spin to change working side with ease. Can be made of wood or plastic but finish is critical. Good wooden handles are solid so they do not break with usage. A coating of varnish is applied to ensure smoothness. Plastic handles should be made of strong plastic which will not crack if the brush is dropped.

EPOXY

High grade adhesive that locks filaments firmly in place. An indirect way to test filament bonding with ferrule is to check for filament shedding. Make an 'L' shape by stretching out your index finger and thumb. Use your thumb bang the heel of the brush several times. Then glide your hand over the brush head to see if any loose filaments are released.

FILAMENTS LEVEL, MIXING & FILLING

A brush which has greater variants of filament lengths will bend more gradually in response to brush pressure, allowing finer control and less paint splatter.

Make sure the filaments have been filled in a straight line and the appearance of the brush looks linear. Good filling of the brush will not have any diagonal or angled filaments in the head of the brush.

SPACER

Well placed wooden strips that create a reservoir to carry paint and improve pick-up & release.

With a wide variety of brush sizes and types available, it can be overwhelming to know which brush to choose. The key is to match the brush to the project or surface being painted. Professional painters often use multiple brushes for each project, including a large size brush for coverage and a smaller one for detailed areas or furniture pieces. Understanding the appropriate brush size and type for different applications is essential in achieving optimal results in painting projects.

ULTIMATE

ELITE SERIES

PROFESSIONAL SERIES SUPERIOR & LONG LASTING

- Professional-grade design.
- Ultra Tapered synthetic blend filaments.
- Excellent filament shape retention for durability.
- Smooth paint flow for efficiency.
- Rust-free stainless steel ferrule.
- Comfortable soft grip handle.
- Smooth and even finish on surfaces.

PAINT ROLLERS

HOW TO RECOGNIZE A PROFESSIONAL ROLLER

FABRIC DENSITY

High quality rollers will use thick dense fabrics. Don't confuse this with pile height (which is the total length of the fabric piles from the root of the fabric to the tip).

Short pile length rollers can also have very high density. As a general rule, short pile height are better for smooth finishes, medium for semi smooth, and long piles for rough and textured finishes.

PUFF

This releases the paint onto the surface. The puff should look like one continuous fabric, without any gaps. Having gaps will lead to an inconsistent finish on the wall.

The starting point of the fabric onto the core is usually the weakest point on the puff. If it begins to unravel the remaining puff will also unravel. Make sure it is strongly fasted to the

BONDING METHOD: THE

High quality rollers always use Therm... fabric onto the core. This technique... core, melting it slightly & then quickly... onto it. This guarantees the highest... lowest risk of

ROLLER COVER FACTS

KNITTED

Knitted covers are attached to the core by a single pass through. This is an 'open stitch' process that creates good pick up, release & enhances coverage of the roller.

WOVEN

Woven fabrics are individually attached to the core by two pass throughs. This 'double lock' produces a smooth & lint-free finish and shed-resistant performance in paints.

Base of the roller cover. High quality... of Polypropylene (PP). PP cores... never lose their shape, and change... extremely low To check if core... should look white in colour

MICROFIBER fabric is a high-quality material used in paint rollers for smooth and even paint application. It offers excellent paint absorption and release, is durable, and ideal for various painting projects. Its efficiency and effectiveness make it a must-have choice for achieving professional results.

WOOVEN POLYESTER roller fabric is a durable, versatile, and cost-effective material used in paint rollers. It offers excellent paint pick-up, even release, and is resistant to shedding. Suitable for both water-based and oil-based paints, polyester fabric provides smooth application and minimal linting, making it a popular choice for DIYers and professional painters.

KNITTED POLYESTER are low shedding fabric roller covers and are known for their paint pickup and ease of cleaning for reuse. With an open stitch design, they have excellent paint pickup capabilities, making them efficient for applying water-based paints and primers. However, due to their light shedding, they are recommended for use with water-based paints and primers only.

ROLLER

HEAT-BONDING

Heat-Bonding to bond the fabric. The heat of the roller heats the plastic, ensuring a strong bond. By rolling the fabric, the heat is distributed evenly, ensuring a strong bond. The heat-bonding quality & the heat of fabric unwinding.

CORE

Roller cores are made of high-quality plastic. They are highly resilient, and the chances of breaking are minimal. If the material is PP, the material is clear & translucent.

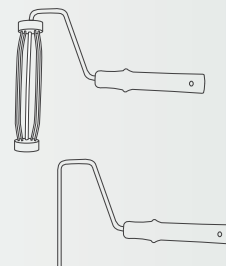

MECHANICAL CENTER-SPIN

Designed to roll smoothly over all surfaces and with all kinds of points. The spinning of puff should be smooth, frictionless and not bumpy. This will give the painter comfort and control, and a uniform finish to the pointed surface.

TWO STYLES AVAILABLE

5-SPOKE CAGE allows for the puff to be put firmly onto it, ensuring the puff does not unfasten from cage during use: & can be re-used with single puffs.

STICK STYLE ROLLER reduces total weight of roller giving painter more comfort & less fatigue for long working hours.

ROD

Sturdy & chrome plated rod that connects the cage to the handle. Rod should be sturdy & made of hard steel so that it does not easily bend with use.

High quality rollers rods will be chrome-plated to protect from rust making appearance shiny uniform.

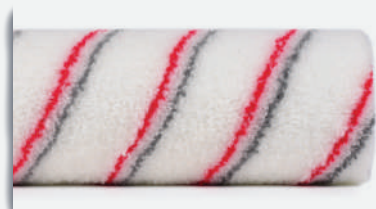

COMFORTABLE & STURDY HANDLE

Handle should feel very comfortable when gripped by a painter without adding any undue strain to his neck, back, or arms. Should be made of strong high-quality plastic which will not crack if dropped. Examine plastic to check for any rough edges. The more uniform and softer the handle the better the plastic quality. Should be compatible with an extension pole.

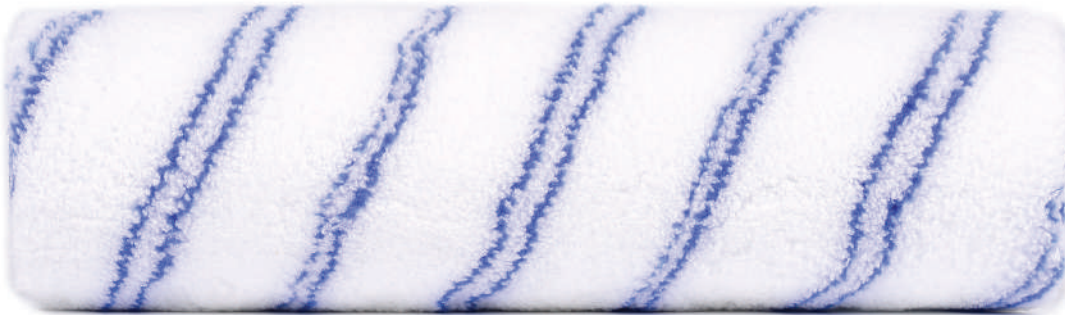

ACRYLIC roller fabric is a high-quality material known for its excellent paint absorption and smooth paint application. It is durable, resistant to shedding, and compatible with various types of paints, making it a popular choice for DIYers and professional painters.

MOHAIR roller fabric is a premium material used in paint rollers known for its luxurious finish and superior paint application on smooth surfaces. It offers smooth paint release, and minimal shedding. Mohair fabric is durable and ideal for applying oil-based or solvent-based paints. Its exceptional performance and quality make it a top choice for achieving a flawless and professional paint finish.

A **TEXTURE ROLLER** is a specialized paint roller designed for creating unique textures and patterns on walls, ceilings, or other surfaces. It typically features a durable foam cover with specific texture patterns. They are commonly used in decorative painting, faux finishing, and interior design applications to achieve professional-looking textured finishes.

MICROFIBER

MICROFIBER

- Picks up & releases more paint than the leading competitive microfiber
- Improved construction means fewer fibers in the paint for smoother results
- Unique fiber blend grips & holds paint, virtually eliminating spatter
- Results show reduced stipple when compared to like fabrics
- This all-rounder roller is perfect for most paint jobs
- Available in different pile heights to suit different project needs
